Bacteria and viruses

Racks covered with a special coating ANTI-BACTERIAL and ANTI-VIRUS

- At the customer's request, we cover our products with a specialist coating that protects the users and the materials stored on them against: bacteria, viruses, mold, mycelium, algae and yeast
- Thanks to the use of nanotechnology to release silver ions, protection works for several years regardless of the intensity of exploitation
- On special request, this innovative solution can be applied to all of our products: electric sliding racks, crank sliding racks and stationary racks. Also It can be applied to laboratory furnitures
- The coating has completed the ISO 10993-1 biocompatibility tests required of a permanent medical implant and is comply with JIS Z 2801:2000
- Products with a special anti-bacterial and anti-virus coating find many customers all over the world
